

PROBLEM-SOLVER FOR NORTH AMERICAN ENGINEERED FLOORING MANUFACTURERS

Part of West Fraser's Engineered Strand Product (ESP) line, DuraSmart is scientifically designed for use as a strong, stable, and safe core material for engineered flooring manufacturers. DuraSmart is a sustainable and reliable core alternative that is produced domestically.

INDUSTRIAL NEEDS MEET WEST FRASER QUALITY

West Fraser manufactures engineered wood products serving a range of industrial purposes and performance requirements. Using the latest in strand & resin technology and continuous press mill capabilities, we have the flexibility to customize specific properties, lengths, widths, thicknesses and surface characteristics. We develop value engineered solutions designed to save time, waste and money while improving processes.

DURASmart CORE LAYER

SOLID WOOD VENEER

PROTECTIVE COATING

DURASmart OFFERS EXCELLENT STABILITY, GREATER SUSTAINABILITY AND EXCEEDS EPA AIR QUALITY STANDARDS

- ✓ DuraSmart provides consistent high strength properties which improves machinability and laminating during the manufacturing process
- ✓ Designed to minimize bowing, cupping and end lift
- ✓ Manufactured in North America from renewable aspen or southern yellow pine
- ✓ When hardwood lamella is properly bonded to our DuraSmart core, the flooring product will pass the HPVA (American National Standard for laminated wood flooring) bond line test (Three-Cycle Soak Test)
- ✓ Precision sanded to strict thickness tolerances and to manufacturer's specifications
- ✓ Engineered to withstand all typical rigors of wood floor environments
- ✓ Exceptional core strength
- ✓ No added Urea-Formaldehyde - TSCA Title VI and CARB exempt
