

ENGINEERED WOOD CORE FOR HARDWOOD FLOORING

RENEWABLE TIMBER SOURCED AND MADE IN NORTH AMERICA.

PROBLEM-SOLVER FOR NORTH AMERICAN ENGINEERED FLOORING MANUFACTURERS

Part of West Fraser's Engineered Strand Product (ESP) line, DuraSmart is scientifically designed for use as a strong, stable, and safe core material for engineered flooring manufacturers. DuraSmart is a sustainable and reliable core alternative that is produced domestically.

DURASMART CORE LAYER

SOLID WOOD VENEER

PROTECTIVE COATING

THE CORE OF YOUR NEW STRATEGIC ADVANTAGE

DuraSmart's scientific blend of stranded wood fiber, advanced resins, and proprietary pressing technologies deliver multiple advantages over other materials, giving you a multi-faceted edge over competitors.

**DURASmart OFFERS EXCELLENT STABILITY,
GREATER SUSTAINABILITY AND EXCEEDS
EPA AIR QUALITY STANDARDS**

KEY PRODUCT FEATURES & BENEFITS

- DuraSmart provides consistent high strength properties which improves machinability and laminating during the manufacturing process
- Precision sanded to strict thickness tolerances and to manufacturer's specifications
- Exceptional core strength
- No added Urea-Formaldehyde - TSCA Title VI and CARB exempt
- Engineered to withstand all typical rigors of wood floor environments
- Designed to minimize bowing, cupping and end lift
- Manufactured in North America from renewable aspen or southern yellow pine
- When hardwood lamella is properly bonded to our DuraSmart core, the flooring product will pass the HPVA (American National Standard for laminated wood flooring) bond line test (Three-Cycle Soak Test).
